

Neural Machine Translation

(Unsupervised, Supervised, Multilingual and Self-Supervised)

Cristina España-Bonet
DFKI GmbH

Low-Resource NLP:
Multilinguality and Machine Translation
Webinar Series — Session III
13th July 2021

- 1 Unsupervised MT
 - Recap on Basics & Cross-Lingual Embeddings
 - The Low-Resource Setting
- 2 Supervised NMT
 - Basics
 - The Low-Resource Setting
 - Multilingual Neural Machine Translation
- 3 Self-Supervised NMT
 - Basics
 - The Low Resource Setting (Session IV)

Recap, Unsupervised MT

Main Ingredients

1. Data

- Monolingual corpora

2. Initialisation

- **Cross-lingual embeddings**
- Deep MLM pretraining

3. Training

SMT and/or **NMT**

- **Denoising autoencoder**
- **Backtranslation**

Recap, Unsupervised MT

From Supervised Mapping to Unsupervised Self-Learning

1 Supervised

- Joint learning
 - Regularization term in the loss function
 - Creating pseudo-bilingual corpora
- **Mapping** (post-hoc alignment)

2 Unsupervised

- **Mapping with self-learning**
- Mapping with adversarial training

Recap, Unsupervised MT

Mapping Approaches: Isomorphism (and Other!) Assumption

We talked about:

- Isomorphism:
spaces should be isomorphic for (linear) mappings to be effective

(Figure from *Conneau et al., 2017*)

- (Solving the) Procrustes Problem
- Hubness and margin-based similarity measures

Recap, Unsupervised MT

(Supervised) Cross-Lingual Embeddings by Mapping

- 1 We have monolingual embeddings
- 2 We have a (small) dictionary
- 3 We solve the **Procrustes problem** to find the projection matrix W
- 4 Given a word in L1 and W , the equivalent word in L2 can be found by its nearest neighbours according to a **margin-based similarity** measure

Recap, Unsupervised MT

Self-Learning (Mikel Artetxe Slide)

- 25 word pairs ✓
- Numeral list ✓
- Random dict. ✗

$$W^* = \arg \min_{W \in O(n)} \sum_i \min_j \|X_{i*} W - Z_{j*}\|^2$$

Self-learning

The difference between supervised and unsupervised is the (induction of) the **seed dictionary**

Recap, Unsupervised MT

The Three Principles (from Lample et al., ICLR, 2018)

Initialisation

B)

Denoising (LM)

Backtranslation

● observed source sentence
○ unobserved translation of a target sentence
× system translation of a target sentence

● observed target sentence
○ unobserved translation of a source sentence
× system translation of a source sentence

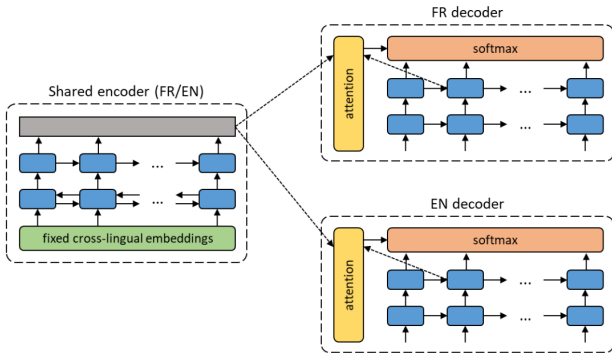

Recap, Unsupervised MT

Basics with Principles (Slides from Mikel Artetxe)

Training

— Supervised

Une fusillade a eu lieu à l'aéroport international de Los Angeles.

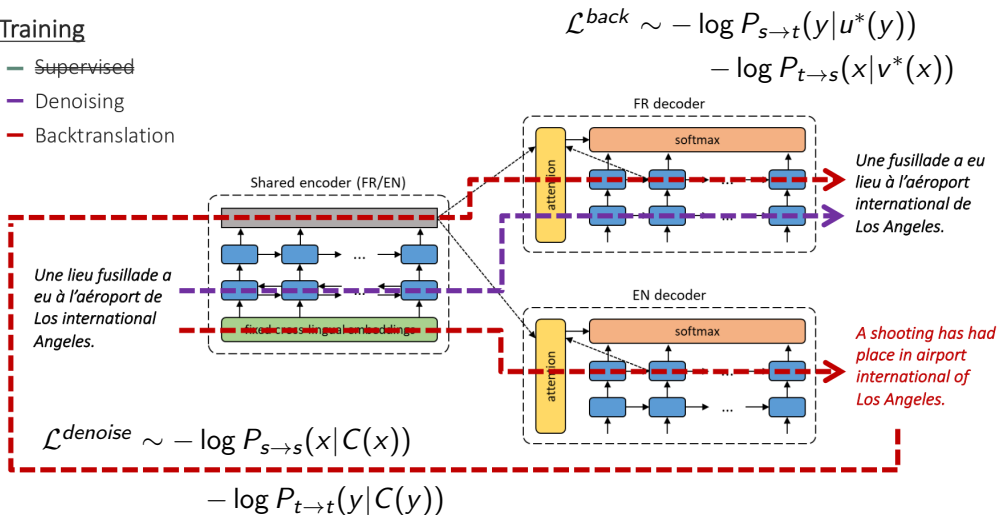

There was a shooting in Los Angeles International Airport.

Recap, Unsupervised MT

Basics with Principles (Slides from Mikel Artetxe)

Training

- Supervised
- Denoising
- Backtranslation

Recap, Unsupervised MT

Evaluation with BLEU

		newstest2014				newstest2016

Unsupervised MT for Low-Resource

An Approach for Low-Resource MT?

- No need for parallel data, only monolingual, **but**
- News Crawl 2007–2013: 749 million tokens in *fr*, 1606 in *de*, 2109 in *en*

Unsupervised MT for Low-Resource

An Approach for Low-Resource MT?

- No need for parallel data, only monolingual, **but**
- News Crawl 2007–2013: 749 million tokens in *fr*, 1606 in *de*, 2109 in *en*

When Does Unsupervised Machine Translation Work?

Kelly Marchisio, Kevin Duhand and Philipp Koehn, WMT 2020

- on different scripts and between dissimilar languages?
- with imperfect domain alignment between source and target corpora?
- with a domain mismatch between training data and the test set?
- on the low-quality data of real low-resource languages?

Unsupervised MT for Low-Resource

When Does Unsupervised Machine Translation Work? Marchisio et al. (2020)

<i>Corpus</i>	Supervised A / A	Parallel A / A	Disjoint A / B	Diff. Dom. A / CC*
Ru-En	26.9	23.7 (-3.2)	21.2 (-5.7)	0.7 (-26.2)
Fr-En	29.9	27.6 (-2.3)	27.0 (-2.9)	3.9 (-26.0)

- A, B disjoint parts of UN corpus, CC (Common Crawl)
- SacreBLEU on newstest2019 (Ru-En) and newstest2014 (Fr-En)
- Different domain even more crucial than distant languages
- Why?

Unsupervised MT for Low-Resource

When Does Unsupervised Machine Translation Work? Marchisio et al. (2020)

	Condition	Min	Max	μ	σ
Fr-En	Parallel	48.00	50.20	49.09	0.69
	Disjoint	37.88	39.09	38.47	0.37
	Diff. Dom.	0.00	17.27	7.97	7.95
	News	25.86	28.10	26.97	0.56
	CC	25.87	27.60	26.90	0.51
Ru-En	Parallel	32.24	34.04	32.95	0.47
	Disjoint	25.08	26.96	25.79	0.58
	Diff. Dom.	0.00	0.10	0.01	0.03
	News	22.19	23.77	23.10	0.44
	CC	0.00	24.69	12.61	11.45

- Accuracies (%) of induced dictionaries on 10-11 runs. Bold experiments were unstable

Unsupervised MT for Low-Resource

When Does Unsupervised Machine Translation NOT Work? Ruiter et al. (2021)

	English	Afrikaans	Nepali	Kannada	Yorùbà	Swahili	Burmese
Typology	fusional	fusional	fusional	agglutinative	analytic	agglutinative	analytic
Word Order	SVO	SOV,SVO	SOV	SOV	SOV,SVO	SVO	SOV
Script	Latin	Latin	Brahmic	Brahmic	Latin	Latin	Brahmic
sim(L-en)	1.000	0.822	0.605	0.602	0.599	0.456	0.419

- We have seen different domains (src vs. tgt, train vs. test). But also...
- When the word order is very different, different typology, different script
- All this makes mapping word embeddings a challenge

Unsupervised MT for Low-Resource

When Does Unsupervised Machine Translation NOT Work? Ruiter et al. (2021)

Supervised NMT

The Low-Resource Setting

- Deep learning needs a huge amount of data
- As any machine learning problem, **parameter tuning** is crucial...
- but it is also extremely slow for NMT
- Initial belief that SMT is better than NMT
- **Nope!** Tune your system... and use a network you can *fill*
 - small network, fewer layers, larger dropout, less vocabulary...

The Low-Resource Setting

Revisiting Low-Resource Neural Machine Translation

Koehn and Knowles, 2017

- 6 challenges for NMT
 - Amounts of training data
- BLEU scores for English–Spanish systems

BLEU Scores with Varying Amounts of Training Data

The Low-Resource Setting

Revisiting Low-Resource Neural Machine Translation

Sennrich and Zhang, ACL, 2019

German→English IWSLT results, BLEU

ID	system	100k words	3.2M words
1	phrase-based SMT	15.87 ± 0.19	26.60 ± 0.00
2	NMT baseline	0.00 ± 0.00	25.70 ± 0.33

The Low-Resource Setting

Revisiting Low-Resource Neural Machine Translation

Sennrich and Zhang, ACL, 2019

German→English IWSLT results, BLEU

ID	system	100k words	3.2M words
1	phrase-based SMT	15.87 ± 0.19	26.60 ± 0.00
2	NMT baseline	0.00 ± 0.00	25.70 ± 0.33
3	2 + "mainstream improvements" (dropout, tied embeddings, layer normalization, bideep RNN, label smoothing)	7.20 ± 0.62	31.93 ± 0.05

The Low-Resource Setting

- German→English learning curve
- Beginning of Koehn & Knowles graph

BLEU Scores with Varying Amounts of Training Data

The Low-Resource Setting

Low-Resource Neural Machine Translation

So, clever hyper-parameter tuning is important, but this does not exclude other techniques

- Data augmentation
- Pre-training
- **Multilinguality**

Multilingual NMT

Basics

- Machine translation is at least a bilingual task
- Neural machine translation encodes semantics in vectors (WE)
- Straightforward extension of NMT to multilingual NMT (ML-NMT)
- Simple architecture for ML-NMT: shared encoder & shared decoder
- ML word (or context) vectors lie in the same space (CL-WE)

Multilingual NMT

Basics: Mix the Corpus

traveling around
the world

um die Welt reisen

NMT Brain
en2de

Multilingual NMT

Basics: Mix the Corpus

I like hummus

NMT Brain
en2de

ich mag Hummus

Multilingual NMT

Basics: Mix the Corpus

l'hummus

ich mag Hummus

NMT Brain
{en,ca}2de

Multilingual NMT

Basics: Mix the Corpus

<2en> m'agrada
l'hummus

I like hummus

NMT Brain
{en,ca}2{en,de}

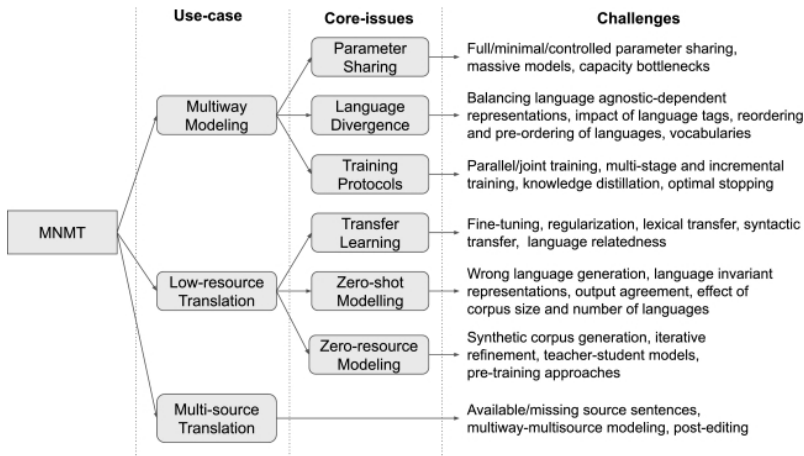

Multilingual NMT

Why should I go Multilingual?

- Shared vocabulary among languages (hummus!)
- Remember dictionaries in supervised mappings for CL-WE? (numbers are also shared vocabulary!)
- In the low-resource setting, we use small BPE that's a lot of shared vocabulary!
- Very simple to implement (tagging a corpus)
- Simpler to maintain (1 vs. $N(N - 1)$ models)

Multilingual NMT

A Survey of Multilingual Neural Machine Translation (Dabre et al., 2020)

Multilingual NMT

Should I go Multilingual?

**In general,
multilinguality is good for the low-resource language (if any);
neutral or bad for the high-resource language in the group (if any)**

Besides, it has other applications
SS-NMT

Multilingual NMT

Towards Self-Supervised NMT

- Machine translation is at least a bilingual task
- Neural machine translation encodes semantics in vectors

Multilingual NMT

Towards Self-Supervised NMT

- Machine translation is at least a bilingual task
- Neural machine translation encodes semantics in vectors
- Straightforward extension of NMT to multilingual NMT (ML-NMT)
- Simple architecture for ML-NMT: shared encoder & shared decoder

<2en> Es war ein riesiger Erfolg || It was a huge success

<2de> È stato un enorme successo || Es war ein riesiger Erfolg

Multilingual NMT

Towards Self-Supervised NMT

- Machine translation is at least a bilingual task
- Neural machine translation encodes semantics in vectors
- Straightforward extension of NMT to multilingual NMT (ML-NMT)
- Simple architecture for ML-NMT: shared encoder & shared decoder

<2en> Es war ein riesiger Erfolg || It was a huge success

<2de> È stato un enorme successo || Es war ein riesiger Erfolg

- ML word (or context) vectors lie in the same space, **but how?**

Multilingual NMT

Multilingual Semantic Space for Context Vectors (easy)

(Espiña-Bonet & van Genabith, 2018)

ML-NMT $\{de, en, nl, it, ro\} \rightarrow \{de, en, nl, it, ro\}$ with TED talks

(t-SNE projection)

Multilingual NMT

Multilingual Semantic Space for Context Vectors (easy)

- Sentences are clustered according to semantics (not languages)
- **I**deal corpus, not a big challenge for NMT
- Let's see something more challenging (for the NMT system!)

Multilingual NMT

Multilingual Semantic Space for Context Vectors (hard)

(España-Bonet et al., 2017)

ML-NMT $\{en, es, ar\} \rightarrow \{en, es, ar\}$ with heterogeneous corpora

(t-SNE projection)

Multilingual NMT

Multilingual Semantic Space for Context Vectors (hard)

ML-NMT $\{en, es, ar\} \rightarrow \{en, es, ar\}$ with heterogeneous corpora

Multilingual NMT

How Close are Sentences Together?

Cosine similarities between the internal representations of the sentences in STS2017 and newstest2013 when translated from L1 into different languages L2, L3, L4.

L1	{L2, L3, L4}	$\langle 2L2-2L3 \rangle$	$\langle 2L2-2L4 \rangle$	$\langle 2L3-2L4 \rangle$
<i>ar</i>	$\{en, es, \phi\}$	0.97(5)	—	—
<i>en</i>	$\{es, ar, \phi\}$	0.94(5)	—	—
<i>es</i>	$\{ar, en, \phi\}$	0.91(5)	—	—
<i>de</i>	$\{fr, en, es\}$	*0.97(2)	*0.98(2)	*0.96(2)
<i>fr</i>	$\{en, es, de\}$	0.96(2)	*0.96(2)	*0.97(2)
<i>en</i>	$\{es, de, fr\}$	0.96(2)	0.98(2)	0.96(2)
<i>es</i>	$\{de, fr, es\}$	*0.97(2)	*0.96(2)	0.97(2)

Multilingual NMT

Multilingual Semantic Space for Context Vectors

- Related languages cluster better together
(for distant languages there might not even exist a mapping)
- The nature of the corpus also affects the clustering
(corpus in different domains per language make the learning more difficult)
- These trends are common in several NLP tasks

Multilingual NMT

- 2 Supervised NMT
 - Basics
 - The Low-Resource Setting
 - Multilingual Neural Machine Translation
- 3 Self-Supervised NMT
 - Basics
 - The Low Resource Setting (Session IV)

Self-Supervised NMT

Question

- NMT embeddings differentiate translations from non-translations very soon
- In a standard NMT, all training sentences are (should be) translations
- Can we feed the system with any kind of sentence pair and let itself decide if it is useful or not?

Self-Supervised NMT

Question

- NMT embeddings differentiate translations from non-translations very soon
- In a standard NMT, all training sentences are (should be) translations
- Can we feed the system with any kind of sentence pair and let itself decide if it is useful or not?
- **Yes, we can!**

Self-Supervised NMT

Main Idea I

Transformers (comics)

There have been three main publishers of the comic book series bearing the name Transformers based on the toy line of the same name.

The first series was produced by Marvel Comics from 1984 to 1985, which ran for 90 issues and produced four spin-off series.

This was followed by a second volume titled Transformers: Generation 2, which ran for 12 issues starting in 1989.

The third series is currently being produced by IDW Publishing starting with an issue #1 in October 2005 with a regular series starting in January 2006.

There are also several limited series being produced by IDW as well.

In addition to these three main publishers, there have also been several other smaller publishers with varying degrees of success.

Transformers (cómics)

Se han publicado tres ediciones principales en la serie de cómics de Transformers, basadas en las líneas de juguetes del mismo nombre.

La primera serie fue producida por Marvel Comics desde 1984 hasta 1985, para ocupar en los rankings de la línea de juguetes de Transformers.

Después de 90 números y produjo cuatro miniseries de spin-off.

Esta fue seguida por un segundo volumen titulado Transformers: Generación 2, que tuvo 12 ediciones a partir de 1989.

La segunda gran serie fue producida por IDW Publishing (comenzando en 2005) a 2006 con series limitadas, hasta que el cómics se quedó en bancarota en 2009.

Además de estas tres ediciones principales, también se han publicado varias ediciones más pequeñas con diferentes grados de éxito.

Por lo tanto, además de las tres ediciones de Transformers mencionadas para obtener más información.

En 2006, Marvel comenzó a publicar cómics de Transformers para ayudar en los rankings de la línea de juguetes de Transformers.

Self-Supervised NMT

Main Idea II

- Parallel data extraction as an auxiliary task to enable NMT training
- NMT training as an auxiliary task to enhance parallel sentence extraction

Self-Supervised NMT

Main Idea II

- Parallel data extraction as an auxiliary task to enable NMT training
- NMT training as an auxiliary task to enhance parallel sentence extraction

Self-supervision?

Just in a non-standard way, none of the tasks is completely supervised

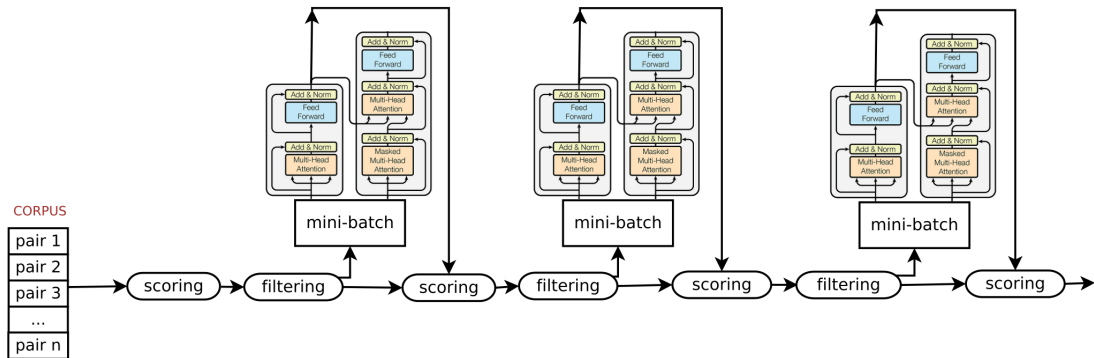

Self-Supervised NMT

Main Idea III (Ruiter et al., ACL, 2019)

- Joint selection of sentences & training NMT
- Uses internal embeddings, i.e., architecture independent
- Bidirectional training $\{L1, L2\} \rightarrow \{L1, L2\}$ (shared encoder)
- On-line process: embeddings change through epochs, therefore selected sentences change through epochs

Self-Supervised NMT

Training Procedure

Self-Supervised NMT

As Always, it's Late...

More to come!!

Just a spoiler before leaving...

Self-Supervised NMT

BLEU on heterogeneous test sets

Thanks! And...

wait!

A close-up photograph of a typewriter keyboard. The focus is on a sheet of white paper with the word "Questions?" typed in a dark, serif font. The paper is slightly angled. Above the paper, the metal frame of the typewriter is visible, featuring several small, reddish-brown rivets or screws. The lighting is soft, highlighting the texture of the paper and the metallic surfaces.

Questions?
